

# Raychem NGC-20-C-E AND NGC-20-CL-E FIELD-MOUNTED ELECTRONIC HEAT-TRACING CONTROL UNIT (EX)

#### **PRODUCT OVERVIEW**

The Raychem NGC-20 is an electronic heat-tracing control unit featuring the benefits of local control and the capability for central monitoring. Raychem NGC-20 control unit can be used for single phase circuits up to 25 A and is approved for use in hazardous areas. The Raychem NGC-20 can provide tight temperature control and is available with an IEC 61508-SIL 2 classified safety temperature limiter on board (NGC-20-CL-E). It measures the temperature with up to two RTD(s) connected to the unit. The Safety temperature limiter has a dedicated temperature input.

#### CONTROL, MONITORING AND ALARM CAPABILITIES

The Raychem NGC-20 offers several different control algorithms including PASC for an optimised electrical heat-tracing control. The Raychem NGC-20 offers alarms for high and low temperature, high and low current, groundfault current and voltage. The trip and warning level of the ground-fault current is user configurable and can be used as a warning and to isolate circuits. The Raychem NGC-20 control unit provides a dry contact relay for alarm annunciation.

#### **AUTOMATED HEAT-TRACING SYSTEM CHECK**

To ensure system integrity the Raychem NGC-20 control unit can be configured to periodically check dormant heating cables for faults. As a consequence maintenance is systematically informed about the status of the heat-tracing system and unexpected and usually expensive downtime of important pipelines can be reduced.

#### **COMMUNICATIONS AND NETWORKING**

The Raychem NGC-20 control unit is equipped with a RS-485 interface. Through this interface up to 247 Raychem NGC-20 units can be networked to a single Raychem NGC-UIT or to one serial port of standard PC running Pentair´ Raychem Supervisor software.

The Raychem NGC-20 control unit can as well be monitored and/or configured via the Raychem NGC-CMA wireless handheld device. This device is available for hazardous and non-hazardous areas.

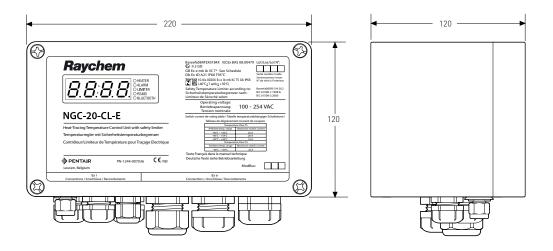

#### **INSTALLATION**

The Raychem NGC-20 control unit can be installed in the field near the heating application. The Raychem NGC-20 enclosures are manufactured from high impact-resistant, UV stabilized glass-filled polyester suitable for installation indoors or outdoors. One heating cable can be directly connected to the unit. The units can be mounted on the heated surface via an appropriate support bracket.

#### **CONFIGURATION AND COMMISSIONING**

The Raychem NGC-20 control unit can be commissioned locally by means of a handheld programming device (Raychem NGC-CMA) or from a central location using the Raychem NGC-UIT or Raychem Supervisor Software. After programming, all settings are permanently stored in the non-volatile memory of the Raychem NGC-20 control unit, avoiding loss of data in the event of power failure or after a long term power shutdown. The Raychem NGC-20 control unit allows the heating and power cable to be connected directly to the unit.
